PRACTICAL 04 / BEGINNER LAB

Bridge a fraction: 0.1 GLD

Name: _____ Date: _____

Aim. Practice 18-decimal amount conversion with a small transfer.

Before you start. The route is deployed and the signer holds BSC GLD. Compare with practical 02; only the amount changes.

Commands

```
$A = @(
  '--origin','bsctestnet','--destination','sepolia',
  '--amount','100000000000000000','--relay'
)
npm.cmd run warp:send -- @A
# After delivery:
npm.cmd run verify
```

Expected result

Exactly 0.1 GLD moves. If starting from zero bridged supply, BSC locked collateral and Sepolia total synthetic supply both become 0.1. Do not type --amount 0.1: the CLI expects an integer in smallest units.

Record your observations

Origin / destination: _____
Amount or setting: _____
Dispatch hash or verification time: _____
Message ID / result: _____

Quick questions

- Write 0.1 GLD multiplied by 10^18.
- Does sending one tenth of a token reduce gas by ten times?

Use testnets only. Run from the selected kit project folder. Use npm.cmd. Amounts are in smallest units. Never record a private key or recovery phrase on this sheet.
